

SURFACEWISE®

Trans-Bridge Lines treats our motorcoaches with SurfaceWise®2, an EPA-approved antiviral solution. This breakthrough coating provides enhanced protection by the sustained killing of 99.9% of viruses, including Coronaviruses, on surfaces.

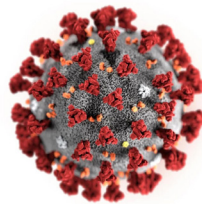

HOW IT WORKS ...

1

The solution is applied to high-touch surfaces via electrostatic spraying through the motorcoach.

2

As Coronaviruses come in contact with the antiviral coating, the cleaning agent physically breaks down the virus.

3

The solution's barrier provides sustained protection and begins killing new viruses on contact for up to 90 days.

BENEFITS OF SURFACEWISE®2 ...

- Antimicrobial creates an invisible barrier that can be applied to both porous and non-porous surfaces.
- Antimicrobial continuously protects and remains active on the applied surfaces for 90 days, killing viruses/bacteria 24/7.
- Prevents the mutation of adaptive microorganisms into Superbugs.
- Can be applied with a basic spray bottle, or a high-tech spray system.

SAFE TO USE ...

- Safe for any environment and can be used on any surface.
- EPA registered and FDA approved.
- Environmentally friendly due to non-leaching, non-depleting bound technology.
- Can be used on indoor and outdoor surfaces.
- No toxins and not a poison.

ALL AROUND CLEAN ...

Our Extreme Clean Commitment is our promise that we're taking bold measures to help ensure the well-being of our employees and passengers.
