

BIOPROTECT™ 500

Trans-Bridge Lines treats our motorcoaches with **BIOPROTECT™ 500**, an antimicrobial technology that provides continuous protection by the sustained killing of 99.9% of viruses, including Coronaviruses, on surfaces for 90 days.

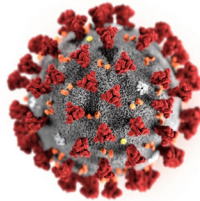

HOW IT WORKS ...

1

The solution is applied to high-touch surfaces via electrostatic spraying throughout the motorcoach.

2

As viruses come in contact with the antiviral coating, the cleaning agent physically breaks down the virus.

3

The solution's barrier provides sustained protection and begins killing new viruses on contact for up to 90 days.

BIOPROTECT™ 500 FACTS ...

- Creates an invisible barrier that can be applied to both porous and non-porous surfaces including upholstery and glass.
- Continuously protects and remains active in a dry state on applied surfaces killing viruses and bacteria.
- Approved for commercial application.
- Environmentally and responsibly made in the U.S.A.
- Uses zero Triclosan, heavy metals, arsenic, titanium, phenols, or poisons.
- Patented, registered, and extensively tested.
- **BIOPROTECT™ 500** is an unscented, colorless, and water-based formula.
- Effective against a broad spectrum of microbes.

ALL AROUND CLEAN ...

Our Commitment to Clean is our promise that we continue to take measures in ensuring the well-being of our employees and passengers.
